

For the benefit of customers and society, we will continue to be experts in manufacturing reliable products.

Protection devices detecting trouble and preventing the accident for traction transformer

Products

Dial thermometer, Oil flow relay, Oil level detector, Pressure relief device

About Products

Protection devices which detect the abnormality of the traction transformer for preventing the accident

1. Expected customers and Business partners

Manufacturer of traction transformer, and distributor or agent trading related components.

2. Advantages and Effects of this product/technology

- Dial thermometer : Monitor for oil temperature in transformer.
- Oil flow relay : Monitoring device of oil stream in piping system for watching the pump running.
- Oil level detector : Detector for getting low oil level in transformer.
- Pressure relief device : Mechanical device for relief of excessive pressure build up in large volumes of gas or oil in transformer.

3. History, Sales performance, and Scale of market share

- Vibration and shock resistance to be able to withstand the forced vibration and shock during running of the rolling stock.
- Strong structure to be able to withstand the scattering stones or the like during running of the rolling stock.
- High durability in mechanical structure and electricity.
- Available for use under high temperature and humidity, and in space where dust and muddy water splashing.
